WHAT WILL EACH BIDDER BE REQUIRED TO INVEST INTO THE PARK TO ENSURE ITS SUCCESS?

Waterfront Access & Open Space

Funding mechanism

Who will finance the implementation?

Cost of implementation - Funding source for implementation?

WILL THE BIDDER BE REQUIRED TO PERFORM A MITIGATION PLAN TO PROTECT THE WATERFRONT?

If you have additional comments or concerns, please provide them below.

FLOOD PROTECTION ACTIVITY

The waterfront protection game asked participants to use a kit of parts to protect a stretch of the waterfront with a constrained budget. The protection looks like a set of wall, storm, raised, or open space, and development. Participants had different abstracted costs and development rates with incentives (credit) to purchase non-development protective measures. All components of the kit were site-specific as per the site's unique properties and context, and the game was equally adaptive. Otherwise, each component had different evaluation criteria in five other categories.

Edible learning garden
Wild Space
Dog park
Urban farm
