

# URBAN FARMING TIPS: RODENT MITIGATION

If you have a rodent issue in your greenspace, here are several steps to follow:

- always report rodent activity by calling 311
- hire a licensed and insured pest company with IPM (Integrated Pest Management) techniques
  - IPM = management prioritizing the least damage to living beings and the environment
- consider different techniques including bait and traps
  - bait - food used to lure rodents, often poisonous
  - traps - used to capture rodents, often involving extermination

For more information see our Rodent Management webpage:
