

GO BOSTON 2030

REVISIONED

Go Boston 2030 ReVisioned

Building our Transportation Future

Project Overview

Go Boston 2030 is the City's transportation plan. It is a roadmap for achieving ambitious safety, access, climate, and equity goals. The plan has two parts:

A Vision

Goals and targets to ensure that residents have excellent and equitable travel choices in the future. The transportation system will support the economy and public health in a changing climate.

An Action Plan

A list of transformative policies and projects, resulting from a broad-reaching community engagement process.

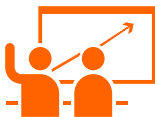

Go Boston 2030 has guided transportation investments since its launch in 2017. More than half of the projects in the plan are already completed or in design. Now, Go Boston 2030 ReVisioned is an opportunity to evaluate our progress and stake our path toward Boston's transportation future.

Go Boston 2030 ReVisioned has three primary components:

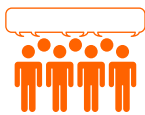

Are We Making Progress? → Update Data and Metrics

The plan's targets include improving safety, expanding access, and reducing emissions. Go Boston 2030 ReVisioned will create a webpage where we'll report annually on our progress.

Are We Investing in our Future? → Identify New Projects

Some Go Boston 2030 projects are complete, some are still in design, and some have yet to start. Go Boston 2030 ReVisioned will track existing projects and identify new ones that advance our goals.

Are We Meeting Bostonians' Needs? → Engage Focus Communities

Two years of city-wide community engagement informed Go Boston 2030. Go Boston 2030 ReVisioned will conduct focused community engagement to reach underrepresented communities.

Learn More and Get Involved!

We hope to engage residents, businesses, and community organizations in our planning.
